

SELF-SERVICE TERMINAL

Abstract

A self-service terminal (14) comprising a port for outputting transaction details is described. The terminal is operable to append current information relating to preferences (such as share prices, exchange rates, and such like) previously selected to transaction details output via the port. A method of providing current information relating to preselected preferences to a user at a terminal is also described. The method comprises the steps of: identifying a user; accessing a datastore to obtain preselected preferences associated with the user; obtaining current information relating to the preselected preferences; and, in response to a request to output transaction details to a port, appending the current information to the transaction details.
